CONDITIONS OF SALE

All sheep will be sold under the Auspices of the Texel Sheep Society and the Conditions of sale relevant to individual sales. These can be viewed at **texel.uk/societyrules**

Auctioneers also display copies of the Conditions of sale within the auction house.

DISCLAIMER

The pedigree, performance, genomic information stored by the Society in the iTexel database and published on society pedigree certificates, reports and general publications is as supplied by, or on behalf of the breeder. The responsibility for the accuracy of the information therefore rests solely with the breeder and not with the British Texel Sheep Society Ltd (BTSS).

Health information and footnotes that are stored in iTexel and published in sales catalogues produced by the society, is supplied by or on behalf of the vendor. The responsibility for the accuracy of the information therefore rests solely with the vendor and not with the British Texel Sheep Society Ltd (BTSS).

Performance data and breeding values change over time as new data becomes available.

£PROFIT TEXEL

The Texel Sheep Society provides data collection and performance reporting services to its membership. From 2024, the service and evaluation combines pedigree and genomic data to provide indexes that are simple to use and understand.

In simple terms: higher value = more profit per lamb

The texelplus economic indexes support the breed's development with an increased focus on commercial traits and profitability. The TERMINAL and REPLACEMENT INDEXES reflect the breed's influence on industry. Both are presented as the potential extra profit per lamb born in a commercial setting, compared to the population baseline.

Index	Average	Top 25%	Top 10%	Top 5%	Top 1%
Terminal Expected change in profit per terminal lamb born	£3.75	£5.01	£6.14	£6.82	£8.10
Replacement Expected change in profit per replacement lamb born	£4.26	£5.64	£6.88	£7.62	£9.01

The TERMINAL INDEX supports increased profitability through improving prime lambs and is weighted strongly for meat production. The REPLACEMENT INDEX includes additional maternal traits to optimise production of female replacements.

Commercial producers solely producing prime lambs should use the TERMINAL INDEX to inform their selection; however, those retaining female replacements should use the REPLACEMENT INDEX.

Sub-indexes underpin the indexes to provide more information on the relative values and ranking of animals for growth, fat and muscle weight, and reproduction.

An example
High ranking rams deliver over £4.50 per lamb more than lower-ranking rams. Over a ram's working lifetime, this is easily worth an extra £690 per ram; generated through shorter finish times and improved carcass quality.

Trait weighting

Different emphases are given to individual traits between the terminal and replacement indexes. This results in different sub-index ranks.

Fat weight sub-index

How an animal ranks for fat weight in the carcass. Encourages fat cover.

Accuracy

A measure of the accuracy of the index. The higher the number the better.

Growth sub-index

Captures the benefit from growth using eight-week weight and scan weight information. Faster growth is more advantageous.

Reproduction sub-index

The commercial benefit of lambing ease, litter size and maternal ability. Promotes optimum litter sizes and better mothers.

Index values

The sum of the sub-index values and potential profit per lamb born for terminal and replacement production.

Muscle weight sub-index

How an animal ranks for muscle weight in the carcass. Encourages muscle growth.

Ranking

Where the animal ranks in the population.
