From 1<sup>st</sup> April 2019 the Texel Sheep Society has been providing performance recording services directly to our membership. AHDB-Signet introduced the new National Terminal Sire (NTS) Evaluation this year for all terminal sires breeds within the UK. The Society has agreed to support this new evaluation by providing Pedigree Texel data and so NTS forms the base evaluation for British Texel flocks.

When looking at rams EBVs in the catalogue this year please remember that the introduction of the new evaluation has caused some changes to the indexes and figures from what they have been previously.

•**The Terminal Sire Index and Traits have now been rebased**

*EBVs and indexes have been rebased to the average Texel animal in 2010.*

*You will find that all animals index will have 'fallen' in number. With Top 10% animals having an index of **210** compared with the 361 it was before the change.*

•**Meat traits are now based on a fixed weight rather than age**

*Animals now have their muscle/fat EBVs predicted for a fixed carcass weight rather than at a fixed age.*

When buying a ram, buyers should use the breed benchmark to identify where an animals Estimated Breeding Values (EBVs) rank within the breed. The aim of EBVs are to allow buyers to see how much of an animal's performance is due to its breeding (genetics) and how much has been influenced by the environment that they have been kept in – management, feeding, farm location, housing etc

An animal will pass on half of its genetic merit to its offspring.  
eg, if Ram A has a Scan Weight of +3.33 then his progeny at scanning will be over 1.5kg heavier than average

# British Texel Breed Benchmark 2019

**Remember** EBVs and indexes have been rebased and are now expressed relative to the average Texel Sheep in 2010.
