Retiral Sale of the

RUGLEY FLOCK

on behalf of Messrs FA & L Jackson

The Rugley Texel Flock was established in 1992, the aim has always been to produce fast growing sheep with good carcasses for sale at Kelso.

Recording has been used as a tool to measure performance and the best ram lambs have been CT scanned for 20 years. Selection has been for sheep with high growth rates good loins and gigots. In 2018 half the flock was in the top 1% on Index, this has altered due to changes in performance figures where the emphasis has moved from growth to muscle. All has been used to increase the genetic pool with sons retained in the flock .

Alan and Lorna are retiring, and Lucy is taking the Tenancy at Rugley, she is keeping 14 ewes and the rest are for sale today.

We would like to thank you for your support and hope the sheep are successful for their new owners.

Flock Health Status:

MV Accredited, Last Tested 2019

All Gimmers vaccinated with Cevac and Toxovac.

All Ewes have been injected with Bravoxin 10 and Ovipast.

They will be injected with Cydection 2% prior to Sale.

Scanning results and any changes to Service Sires will be available at the Sale and are believed to be correct but not guaranteed.

Alan and Lorna

From 1st April 2019 the Texel Sheep Society has been providing performance recording services directly to our membership. AHDB-Signet introduced the new National Terminal Sire (NTS) Evaluation this year for all terminal sires breeds within the UK. The Society has agreed to support this new evaluation by providing Pedigree Texel data and so NTS forms the base evaluation for British Texel flocks.

When looking at rams EBVs in the catalogue this year please remember that the introduction of the new evaluation has caused some changes to the indexes and figures from what they have been previously.

- The Terminal Sire Index and Traits have now been rebased

 EBVs and indexes have been rebased to the average Texel animal in 2010.

 You will find that all animals index will have 'fallen' in number. With Top 10% animals having an index of 210 compared with the 361 it was before the change.
- Meat traits are now based on a fixed weight rather than age
 Animals now have their muscle/fat EBVs predicted for a fixed carcass weight rather than at a fixed age.

When buying a ram, buyers should use the breed benchmark to identify where an animals Estimated Breeding Values (EBVs) rank within the breed.

The aim of EBVs are to allow buyers to see how much of an animal's performance is due to its breeding (genetics) and how much has been influenced by the environment that they have been kept in – management, feeding, farm location, housing etc

An animal will pass on half of its genetic merit to its offspring.

eg, if Ram A has a Scan Weight of +3.33 then his progeny at scanning will be over 1.5kg

heavier than average

Remember EBVs and indexes have been rebased are now expressed relative to average Texel Sheep in 2010
